

This listing of claims will replace all prior versions, and listings of claims in the application.

Listing of Claims:

1. (Currently Amended) ~~A method of handling operating characteristics of a profile in a communication terminal, the communication terminal includes a number of user-selectable profiles each including a group of user-adjustable operating characteristics, comprising:~~
receiving at a communication terminal via a communication channel a message including a group of terminal user-adjustable operating characteristics; from a remote terminal transmitted via a communication channel, and
storing information corresponding to the saving the group of terminal user-adjustable operating characteristics as a profile in the communication terminal; and
associating the group of terminal operating characteristics with a user-selectable profile of the communication terminal.
2. (Currently Amended) A method according to claim 1, wherein the group of terminal operating characteristics message includes a ringing tone and at least one graphical picture associated with a user-selectable profile. ~~stored in a profile selected by the user.~~
3. (Canceled)
4. (Currently Amended) A method according to claim 1, 2 wherein the group of terminal operating characteristics message includes at least one of a card, defining contact information and, and/or a calendar note, defining a date of an event associated with a user-selectable profile. ~~, for being stored in a profile selected by the user.~~
5. (Currently Amended) A method according to claim 1, 2 wherein the group of terminal operating characteristics message includes bookmark information defining the location of a server document associated with a user-selectable profile, to be processed by the communication terminal, for storage in a profile selected by the user.
6. (Currently Amended) A method according to claim 1, wherein the message is received

from a remote terminal is a server, providing promotional content.

7. (Currently Amended) A method according to claim 1, wherein the message is received from a remote terminal is a server, providing event driven content.

8. (Currently Amended) A method according to claim ~~1,2~~ wherein the further comprising providing a display on the communication terminal allowing ~~allows~~ the user to discard one or more of the terminal operating characteristics from a received profile message after ~~inspection of inspecting the terminal operating characteristics~~ items included in the profile message.

9. (Currently Amended) A method according to claim 2 wherein the at least one graphical picture includes a plurality of individual pictures, ~~and the pictures are displayed successively in order to create an animation~~ associated with a user-selectable profile.

10. (Currently Amended) A method according to claim 9, wherein the animation ~~becomes is acting as a screen saver when the user has selected the profile for the communication terminal upon selection of the user-selectable profile.~~

11. (Currently Amended) A method according to claim 1, wherein the message ~~furthermore~~ includes a profile name label for the profilegroup of terminal operating characteristics.

12-32. (Canceled)

33. (Currently Amended) A method ~~of handling operating characteristics of a communication terminal, the communication terminal including a number of user-selectable groups of user-adjustable operating characteristics, comprising:~~

receiving at a communication terminal via a communication channel a message including a group of terminal user adjustable operating characteristics; ~~from a remote terminal transmitted via a communication channel, and~~

identifying one or more user-selectable profiles stored on the communication terminal;

and

updating the operating characteristics of the one or more user-selectable profiles to correspond to the received group of terminal operating characteristics.

~~saving the group of user-adjustable operating characteristics individually in each selectable group in said communication terminal.~~

34. (Currently Amended) A method according to claim 33, wherein the group of terminal operating characteristics ~~message~~ includes a ringing tone and at least one graphical picture; ~~stored in a corresponding user selectable group.~~

35. (Canceled)

36. (Currently Amended) A method according to claim 34, wherein the group of terminal operating characteristics further ~~message~~ includes at least one of a card, defining contact information and, and/or a calendar note, defining a date of an event, ~~stored in a corresponding user selectable group.~~

37. (Currently Amended) A method according to claim 34, wherein the group of terminal operating characteristics further ~~message~~ includes bookmark information defining the location of a server document ~~to be processed by the communication terminal, for being stored in a corresponding user selectable group.~~

38. (Currently Amended) A method according to claim 33, wherein the message is received from a remote terminal ~~is a server~~; providing promotional content.

39. (Currently Amended) A method according to claim 33, wherein the message is received from a remote terminal ~~is a server~~; providing event driven content.

40-45. (Canceled)

46. (New) A method according to claim 1, further comprising:
after receiving the message, providing a display on the communication terminal to notify a user of the receipt of the terminal operating characteristics; and
receiving at the communication terminal user input indicating that the received terminal operating characteristics are to be saved on the communication terminal.
47. (New) A method according to claim 1, further comprising:
receiving at the communication terminal user input selecting the user-selectable profile;
and
configuring the communication terminal to operate according to the terminal operating characteristics of the selected profile.
48. (New) A method according to claim 33, further comprising:
providing a display on the communication terminal to notify a user of the receipt of the terminal operating characteristics;
receiving at the communication terminal user input identifying one or more of the received terminal operating characteristics and affirming that the one or more user-selectable profiles stored on the communication terminal are to be updated to correspond to the one or more identified characteristics.
49. (New) An apparatus, comprising:
a processor controlling at least some operations of the apparatus; and
memory storing computer executable instructions that, when executed by the processor, cause the apparatus to perform a method comprising:
receiving a message including a group of terminal operating characteristics;
storing information corresponding to the group of terminal operating characteristics; and
associating the group of terminal operating characteristics with a user-selectable profile of the apparatus.

50. (New) The apparatus of claim 49, the method further comprising:
after receiving the message, providing a display on the apparatus to notify a user of the receipt of the terminal operating characteristics; and
receiving at the apparatus user input indicating that the received terminal operating characteristics are to be saved on the apparatus.
51. (New) The apparatus of claim 49, the method further comprising:
receiving user input selecting the user-selectable profile; and
configuring the apparatus to operate according to the terminal operating characteristics of the selected profile.
52. (New) The apparatus of claim 49, wherein the user interface provided on the display allows the user to discard one or more of the terminal operating characteristics from a received message after inspection of the terminal operating characteristics included in the message.
53. (New) The apparatus of claim 49, wherein the group of terminal operating characteristics comprises a ringing tone and at least one graphical picture associated with a user-selectable profile.
